
Help for Learning OrCAD Capture and Capture CIS

Exercises

The following controls are available:

- **Exercise** Displays the next exercise
- **Display Product** Displays OrCAD Capture or OrCAD Capture CIS
- **Help** Displays this help file
- **Lesson Menu** Ends the interactive exercises and displays the lesson menu
- **Quit** Quits the Learning OrCAD Capture tutorial
- **Always On Top** When checked, OrCAD Capture Exercises stays on top of other windows

When the OrCAD Capture Exercises window first displays, it's set to remain on top of other application windows—even when it's inactive. You can make Capture Exercises a standard window by clearing the Always On Top option checkmark.

As you do the exercises, you may need to move the Capture Exercises window to view the area being discussed. Setting your display to a higher resolution, such as 800 by 600 or 1024 by 768, can reduce the need to move the window.

You can stretch the CaptureExercises window to display more of the text and minimize the amount of scrolling.
