#### **Project Save As**

"Project Save As" functionality has been enhanced to save associated files also along with the project at the new location while maintaining their references. Associated files include referred projects, designs, libraries, simulation profiles, output files etc.

User selects the "Save As" on Design Resources

Home Settings

Copy DSN to Project Folder

Rename DSN to match Project

Copy All Referred Files Present Within Project Folder

Copy All Referred Files Present Out of Project Folder

\*Referred Files include Referred Projects, Libraries, Output Files, Simulation Files etc..

User selects the desired options

# Option Settings-

#### Copy DSN to Project Folder

This option is to specify whether copy the primary dsn also along with project.

#### Rename DSN to match Project

This option is to specify whether to rename the dsn also in case the target project name is different from source project name.

### Copy All Referred Files Present Within Project Folder

This option is to specify whether to copy all the files referred by the project, which are present **within** the source project folder and its subfolders (any level below) to the target project location. Referred files include referred projects, designs, libraries, simulation profiles, output files etc.

## Copy All Referred Files Present Out of Project Folder

This option is to specify whether to copy all the files referred by the project, which are present **outside** the source project folder to the target project location. All these files are copied below a new subfolder "MovedFiles" inside target project directory. Referred files include referred projects, designs, libraries, simulation profiles, output files etc.
