Help for Learning OrCAD Capture and Capture CIS

Lesson Menu

The following keyboard shortcuts are available:

- ALT+M   Deletes progress markers from the lesson menu

- ALT+Q   Quits the Learning OrCAD Capture tutorial

When the pointer is placed over a lesson menu button, a short description of the lesson displays in a tooltip. You start a lesson by placing the pointer on a lesson button and clicking the left mouse button.

If you want to do the interactive exercises for a lesson, but don't want to start the lesson, click the Exercises button for that lesson.

The lesson menu guides you through the tutorial by suggesting the next lesson, and by indicating the finished lessons and exercises. The suggested next lesson is highlighted in green, and the suggested lesson displays in gray after the lesson and its exercises are completed.

As you complete a lesson or an exercise, a progress marker checkmark displays beneath the lesson button. You can delete all progress markers and reset the suggested lesson status by clicking the Delete Markers button.
